

Spencer
PRIVATE HOSPITALS 

**Your care in our hands.
We are not part of a large
hospital group, and as a
result we can take a more
flexible approach, offering
each patient the individual
care and attention that they
need to make a full and
speedy recovery.**

The Spencer Private Hospital opened its first hospital in 1998, and with our close links with the East Kent Hospitals University NHS Foundation Trust, who help us to provide additional services such as intensive care facilities when they are required, we are able to offer a wide range of private healthcare treatments.

Why Choose Us

We understand how choosing a cosmetic surgery provider is an immensely important decision for you. We know each patient is looking to feel confident in the surgical expertise of our consultants', recovery care and comfort during their stay. Spencer Private Hospitals expect to deliver the highest levels of care every time, without fail.

We have a team of consultants', whom must each meet highly stringent eligibility criteria. Each of the supporting nursing staff are trained to deliver the most professional service and always have the patient's physical and mental wellbeing as their primary consideration. We are here to take care of you and we strive to make our hospitals a place and environment you will recommend to others.

Some facts:

- We have a 100% success rate in avoiding and preventing any cases of MRSA
- During the Autumn/Winter period of 2012/13 we avoided and prevented any cases of Norovirus

COSMETIC SURGERY & TREATMENTS

Breast Surgery

Whether the result of pregnancy, breast feeding, simply gravity over time or weight loss, these effects can take their toll on a woman's breasts. Breast surgery could improve your self-esteem, make you feel happier about your appearance and improve the way you view yourself.

Spencer Private Hospitals offer a range of breast surgeries:

- Breast enlargement
- Breast uplift
- Breast reduction
- Male breast reduction

Arm Surgery

Whether as a result of ageing, extreme weight loss or simply for confidence reasons, an arm lift can be the solution for excess skin or the loss of skin elasticity. This is a common procedure, performed under general anaesthetic, and will help make the skin tighter. This can also be combined with liposculpture.

Facial Surgery

Most facial surgery is carried out to help reverse the effects of ageing as well as to improve the symmetry and balance of your face.

Common surgeries include:

- Eyelid treatment (Blepharoplasty)
- Ear pinning (Pinnaplasty)
- Brow lift (Forehead lift)
- Chin implant (Augmentation)
- Nose reshaping (Rhinoplasty)
- Facelift

Nose Surgery (Rhinoplasty)

Rhinoplasty is surgery to reshape or correct the nose. It is one of the most common cosmetic surgeries, helping reduce the size of the nose, reshape the tip, bridge and nostrils, Rhinoplasty could help deliver a pleasing result and boost your self-confidence.

Non-Surgical Treatments

During our lives the effects of ageing, through weather damage, frowning, squinting and smiling can cause lines to begin to form in different areas of your face. Our non-surgical treatments could help to create volume and give a healthy appearance to the face.

Treatments we offer:

- Wrinkle reducing treatments
- Medical microdermabrasion
- Chemical face peels
- Dermal fillers
- Lip enhancement
- Mole/cyst removal
- Thread veins

Leg Surgery

Cosmetic surgery for legs can vary from the removal of excess skin and fat, to the removal of scars, varicose veins and thread veins. We now offer laser treatments for varicose veins, helping reduce any pain or discomfort and improving the look and feel of your legs.

Laser Treatment of Varicose Veins

When varicose veins are eliminated, patients often notice that their legs feel less tired, as well as looking great! We offer the very latest minimally invasive laser treatment for varicose veins. Under ultrasound guidance, a thin fibre-optic probe is inserted through a tiny entry point, usually near the knee. Laser energy is delivered in short pulses to seal the faulty vein so that blood cannot flow through it. The treatment is usually performed on a day-case basis with minimal discomfort and most patients can return to work within 48 hours.

Liposuction Surgery

Liposuction is a great way to remove unwanted fat deposits. It is best suited to removing localised deposits of fat from the hips, tummy, waist or thighs. It can also be used in combination with other procedures such as facelifting to remove fat from the neck, or with a tummy tuck (abdominoplasty) to remove fat from the waistline. It is a technique for improving body shape rather than helping with weight loss.

Cosmetic Abdominal Surgery

If you are unhappy at how your tummy looks and feels, abdominoplasty, commonly known as a 'tummy tuck', could help you achieve a flatter stomach and better feeling, tighter skin.

We see many patients opting for this surgery following having children or having experienced dramatic weight loss. It is also a common procedure to reduce the affects of the ageing process, and could leave patients feeling more confident.

MEDICAL LOANS

Why choose a medical loan?

- Easy and convenient
- Recognised and approved by most leading clinics and hospitals
- Loans from £500 - £10,000
- Safe and secure
